Modular Prison Asset Pack

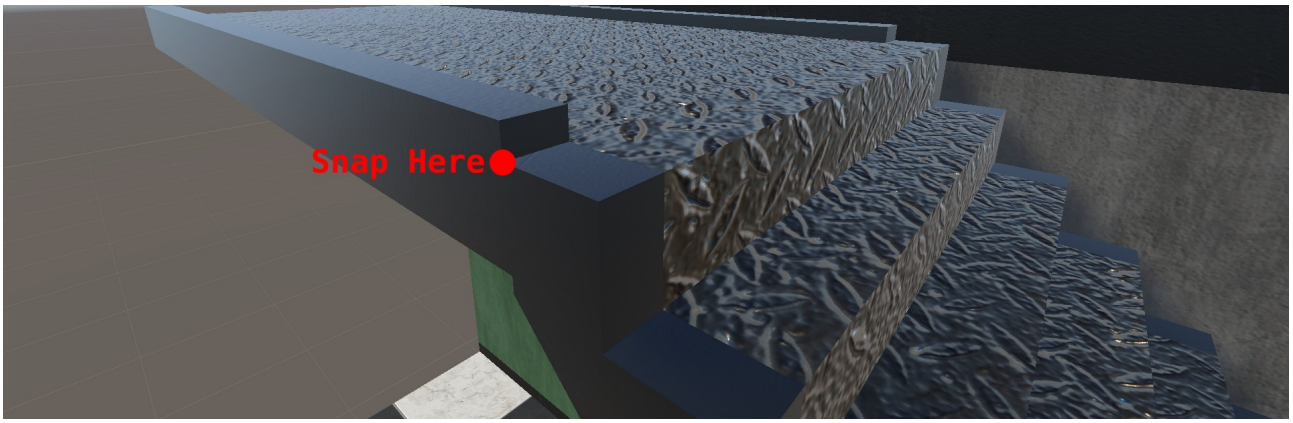

Some Building Tips

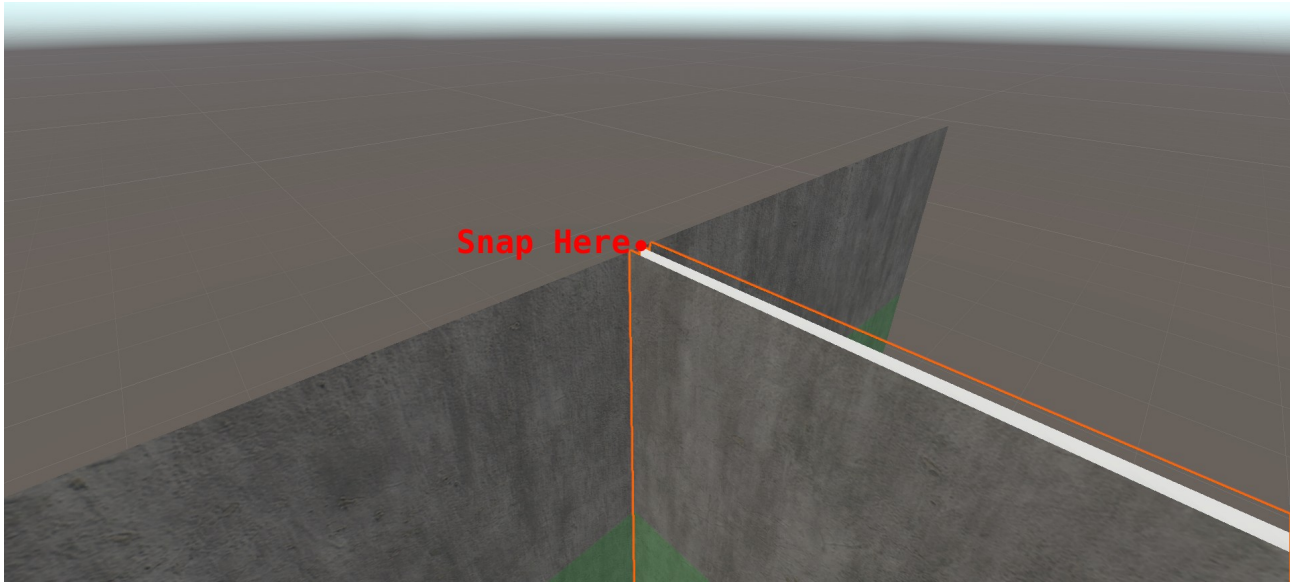

Floors should snap to the middle vertex of the skirting board. You can hold the **V key** to snap vertices together.

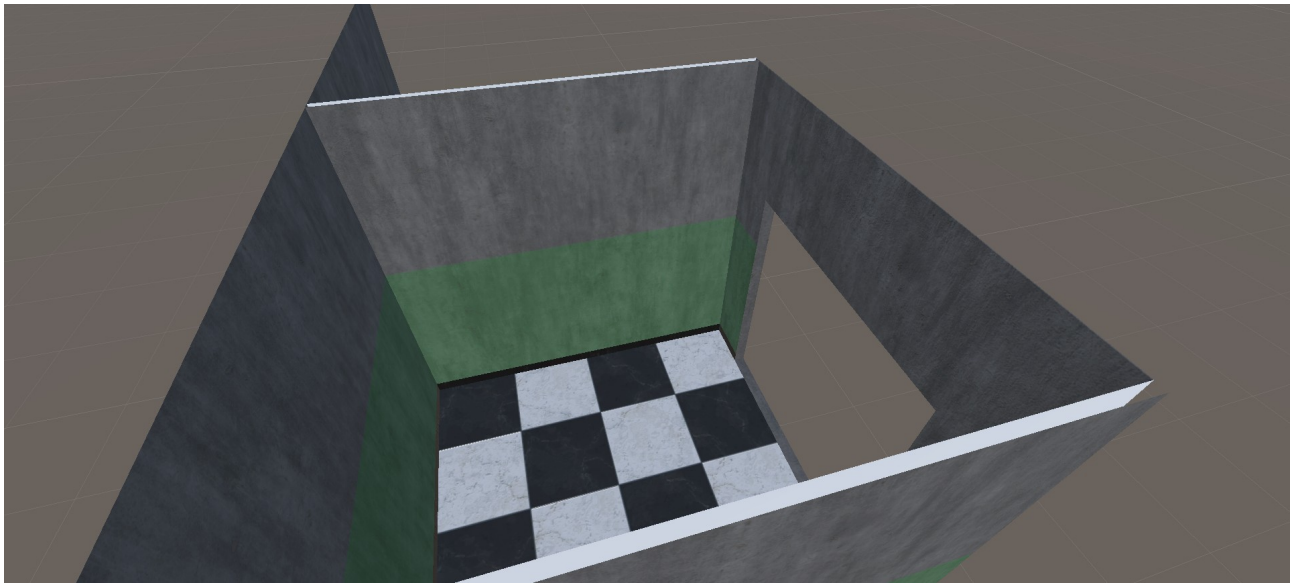

This is because the bottom part of the skirting board is used to snap the catwalk. Using this method is recommended so stairs snap correctly.

“**Middle Walls**” are double-sided walls which can be used to create rooms near each other (like prison cells). They have a center face which can be used to snap them in between two regular walls.
